

Abstract

A gutter system has the portions thereof formed to permit the ends of sections thereof to be nested one within another for forming the elements of the gutter. A contour suitable for such nesting has a vertical fascia panel, a generally vertical outer panel, and a generally horizontal floor panel joining lower edges of fascia panel and the outer panel. An arcuate portion joins the lower end of the fascia panel to the floor panel. A lip is provided along the upper edge of the outer panel with the lip of a first length of gutter fitting around the lip of a second length and the arcuate portion between the fascia panel and the floor of the first length fitted around the arcuate portion joining the fascia panel and floor of the second length to provide nesting. Fold over tabs may be provided along the upper edge of the fascia panel and the lip to lock the ends of the two lengths together, or lock the end of a length of gutter to a corner unit, a down spout drop unit, or an end cap unit.
